- Freelance MERN Stack developer specializing in creating dynamic and scalable web applications, combining expertise in MongoDB, Express.js, React.js, and Node.js. Committed to delivering efficient and innovative solutions for diverse client requirements.
- Got experience in customizing web apps according to client's need.

Contact : 9746035337 - One of my regular client

## EDUCATION

### Bachelor Computer Application Amrita Vishwa Vidyapeetham

08/2023 - Present

#### Courses

- Cisco training for python and networking

## SKILLS

HTML

CSS

JavaScript

Nodejs

Express JS

MongoDB

React

## PERSONAL PROJECTS

Twitter clone - <http://twitter-clone-ccrsxx.vercel.app>

- **Technology Stack:** Developed a Twitter clone using Node.js for the server-side logic. MongoDB utilized as the database for efficient data storage and retrieval
- **Real-Time Functionality:** Integrated Socket.io to facilitate real-time communication between users. Implemented instant updates for tweets, likes, and other interactions.
- **User Engagement:** Focused on enhancing user engagement through features such as real-time notifications and dynamic content updates. Prioritized a smooth and interactive user experience to simulate the engaging nature of social media platforms.
- **User Interface:** Created an intuitive and user-friendly interface mirroring the look and feel of Twitter. Applied responsive web design principles for a seamless experience across devices.

Car rental app-<https://car-rental-app-client.vercel.app/>

- **Technology Stack:** Developed a comprehensive car rental application using the MERN stack (MongoDB, Express.js, React.js, and Node.js).
- **Booking System:** Created a seamless booking system that enables customers to reserve cars for specific time spans. Integrated Stripe for secure online payment processing, providing a convenient booking experience.
- **Admin Dashboard:** Developed an admin dashboard for efficient management of car listings, bookings, and user data
- **Car Management:** Enabled admins to add, update, or remove car listings with details such as model, availability, and pricing. Implemented a dynamic system to prevent double bookings, ensuring a car cannot be booked for the same time span by multiple customers.
- **Payment Integration:** Integrated Stripe for secure and seamless payment transactions, enhancing the overall user experience

E-commerce project - <https://mern-store-gold.vercel.app/>

- **Technology Stack:** Developed a comprehensive car rental application using the MERN stack (MongoDB, Express.js, React.js, and Node.js)
- **Multiple User Flows:** **Buyers:** Browse through store categories, products, and brands. Place orders and make purchases securely. **Sellers/Merchants:** Manage their own brand components within the platform. Add, update, or remove products associated with their brand. **Admins:** Have comprehensive control over the entire store components. Monitor and manage user accounts, product listings, and overall system functionality. **Third-Party APIs:** Utilized third-party APIs to enhance functionalities, such as payment gateways, shipping services, or any other external services
